

Considerations for healthcare apps in cancer services

Health Innovation Wessex
November 2023

Peter Rhodes
Senior Programme Manager – Industry & Innovation

Anna Wykes
Programme Manager – Cancer Innovations

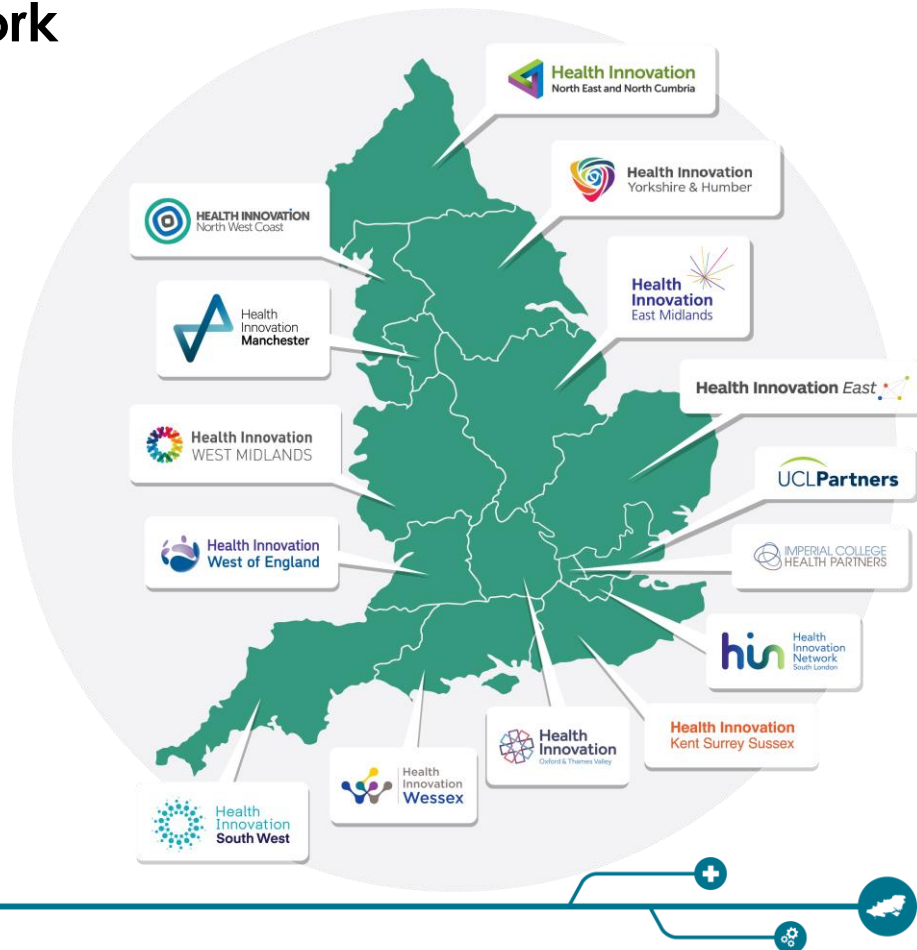

Part of the
**Health
Innovation
Network**

Health Innovation Network

- Previously called the AHSN Network, the Health Innovation Network was established by NHS England in 2013 to operate as the key innovation arm of the NHS.
- Health innovation networks improve lives through health innovation. We support health and care partners to deliver improvements that:
 - Improve the health of patients
 - Save money in health and care, and
 - drive economic growth.
- There are 15 health innovation networks and each one works across a distinct geography, aligning their programmes of work to those of the priorities of their local integrated care boards (ICBs). We operate locally and collaborate nationally to create the right conditions for successful innovation.

Health Innovation Wessex

We support innovators from commercial, clinical, academic or other backgrounds to accelerate the development of their solution to reach patients faster and meet the needs of our NHS.

Our support can be along the whole length of the innovation journey from ideation to implementation and last year, we supported around 3 new innovations per week.

Health Innovation Wessex support

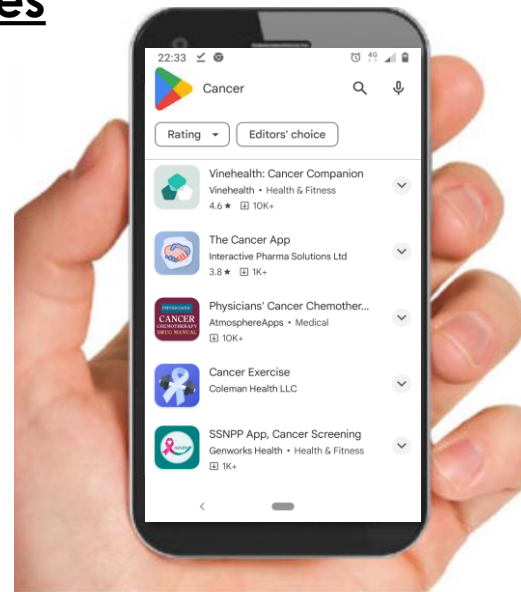

In this first session (~30minutes)

Considerations for healthcare apps in cancer services

1. What do you want to achieve?
2. How to go about it
3. Considerations for purchasing ready-made apps
4. Considerations for in-house development
5. Who can help
6. Q&A (10-15min)

1. What do you want to achieve?

- What's the problem / unmet need?
- What's the improvement you need to achieve?
- Who wants it?
- Who will use it?
- Who will pay?
- How will the cost be justified?
- What does the team think?

2. How to go about it

PROJECT TITLE: Solving our cancer service problem with an app

Company name: My Hospital

Project lead:L Goodness that will be me...

*www.england.nhs.uk/nhs-commercial/central-commercial-function-ccf/procurement-framework-strategy-recommendations/

3. Considerations for purchasing ready-made apps

Product

- **Best fit to specification:**

- Functions and features
- Review panel of clinicians and patients
- Evidence – validation, effectiveness, impact, on-site testing
- Be flexible – if not perfect, is it good enough / adaptable?

- **Support offered:**

- Implementation planning
- Training
- Updates
- Helpline

- **Due diligence for UK / NHS suitability:**

- Medical device regulation
- Information governance
- NHS interoperability
- NHS DTAC
- Call with a reference site

Process

- **Financials:**

- Full cost incl licence, maintenance, implementation, per-usage charges
- VAT
- Business case

- **Compliant procurement process:**

- Use of procurement frameworks
- Open market appraisal
- Formal procurement above ££ threshold

- **Pathway redesign:**

- What work practice has to change to adopt it
- What job roles have to change
- How to manage the change

4. Considerations for in-house development - 1

- **Is there really no suitable product available?**
 - Buy-don't-build is almost always better
 - Best fit / adaption?
 - Written justification for why none suitable
- **Issues:**
 - Effort of development
 - Capacity for design and testing, including colleagues
 - Cost – difficult to define a full final cost in advance
 - Compliance – eg medical device regulation
 - Risks:
 - Project failure – waste of funding and time
 - Service capacity while focused on project
 - Undetected error in clinical use

4. Considerations for in-house development - 2

- **Considerations for success**

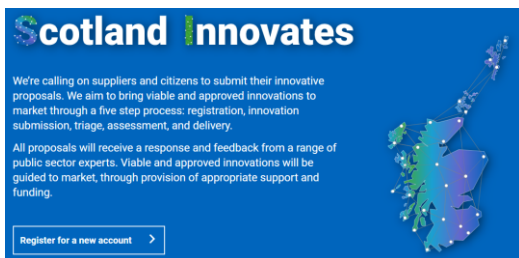

- **Choose the right developer**
 - Review their portfolio
 - Experience with health app development and medical device requirements
 - Quality of their response to the specification
 - Use a procurement framework
 - Call a reference site
- **Detailed design specification**
- **Designate sufficient project time**
- **Advisory & oversight board**
- **Co-design & testing**
- **Commercial prospects for finished product**

5. Who can help

- Trust commercial / innovation leads
- Health innovation networks (England)
- Life Sciences Hub Wales
- Scotland Innovates Assessment Portal

Scotland Innovates

We're calling on suppliers and citizens to submit their innovative proposals. We aim to bring viable and approved innovations to market through a five step process: registration, innovation submission, triage, assessment, and delivery.

All proposals will receive a response and feedback from a range of public sector experts. Viable and approved innovations will be guided to market, through provision of appropriate support and funding.
